Education

Higher School of Computer Science (ESI-SBA)

Engineering & Master's in Information Systems and Web Development

Sidi Bel Abbès, Algeria

Expected 2026

Relevant Coursework:

- **Knowledge Engineering:** Semantic Web (ontologies, RDF, knowledge representation), Multi-Agent Systems
- **Backend & Systems:** Microservices Architecture (Spring Boot, Docker, Kubernetes), Advanced Databases, Oracle Database Administration
- **Distributed Systems:** Big Data, Cloud Computing, IoT, Interoperability of Information Systems
- **Security & Networks:** Information Systems Security (ISO 27005), Networks (CCNA curriculum coverage)
- **Data & Analytics:** Business Intelligence, Machine Learning

High School Diploma

Mathematics & Science Track

2021

Grade: 18.03/20

Technical Skills

Languages: Java, Kotlin, TypeScript, JavaScript, Python, PL/SQL

Backend: Spring Boot, Express.js, Node.js, RESTful APIs, Microservices Architecture

Frontend: React.js, Next.js, TypeScript, Tailwind CSS, Responsive Design, Modern UX patterns

Databases: PostgreSQL, MongoDB, Oracle Database, Prisma ORM, Data Modeling

DevOps: Docker, Kubernetes, Docker Compose, CI/CD pipelines, Git

Tools & Platforms: Kafka (message broker), Pentaho PDI, Power BI, Linux

Domain Knowledge: Semantic Web concepts (from coursework), Knowledge representation, Graph data structures

Technical Projects

E-Commerce Platform

Full-Stack Application / Next.js, TypeScript, Prisma, PostgreSQL

Dec 2024

- Built production-ready e-commerce platform with modern full-stack architecture deployed on Vercel
- Implemented type-safe database operations with Prisma ORM and Neon serverless PostgreSQL
- Designed responsive, accessible UI with Next.js 14 app router, server components, and Tailwind CSS
- Integrated secure authentication, product catalog management, and shopping cart with focus on user experience

Delivery Microservices Architecture

Academic Project / Spring Boot, Kafka, Docker, TypeScript

May 2025

- Architected event-driven microservices system for real-time order tracking using Apache Kafka message broker
- Developed payment processing microservice with Spring Boot and transaction flow orchestration
- Containerized services with Docker and implemented inter-service messaging patterns for scalability
- Designed RESTful API contracts and service communication protocols

Sa7ti Medical Appointment System

Academic Project / React, Node.js, PostgreSQL

May 2023

- Built web and mobile doctor appointment booking platform with patient history management system
- Implemented RESTful API backend with Express.js and PostgreSQL for data persistence

- Developed automated notification system for appointment reminders and confirmations
- Designed intuitive user interface focusing on accessibility for diverse user groups

HeurSupp Academic Hours Calculator

Feb 2024

Academic Project / React, Data Visualization

- Created schedule-based hours calculator with interactive reporting dashboards for academic tracking
- Built dynamic data visualization components using React for schedule analysis and reporting
- Implemented complex data transformations and aggregations for academic data management

Additional Information

Languages: Arabic (Native) | French (Professional Working) | English (Professional Working)

Currently Learning: Advanced Kubernetes orchestration, Microservices design patterns, Graph databases

Interests: Modern web development, Knowledge engineering, User experience design, Open-source contribution
